

Navigating with Internet Explorer Buttons

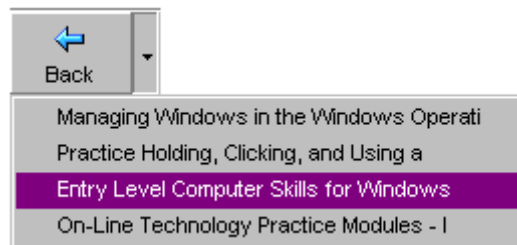

Using the Standard Button toolbar

The image below is a clickable image map. Place the tip of your mouse pointer on any button in the image below. If your mouse pointer turns to a finger, a single click with the left side of your mouse button will carry you to an explanation of how to use the button. Some buttons have been removed from the list because they are not as commonly used. This tutorial will show you how to remove buttons later.

Back - Gently click one time with the left side of your mouse button to go back to the page that you were looking at before you followed the link to take you to the current page.

Back history - Gently click one time with the left side of your mouse button on the down arrow just to the right of the **Back** button. That brings up a list of the sites you have visited using this browser window. To avoid clicking the **Back** button three times to get back to "**Entry Level Computer Skills for Windows**," slide the mouse pointer down to that entry and click one time with the button on the left side of your mouse. These entries are in chronological order with the most recently visited site at the top of the list.

Forward - This button will not be available unless you have used the Back button at least once. If you have used the back button, and the forward button is not grayed out, clicking one time on the **Forward** button will take you to the page you just left when you clicked on the **Back** button.

Forward history - Gently click one time with the left side of your mouse button on the down arrow just to the right of the **Forward** button. That brings up a list of the sites you have visited and then used the **Back** button to return from using this browser window. To avoid clicking the **Forward** button three times to get back to "**A tutorial on saving for new users**," slide the mouse pointer down to that entry and click one time with the button on the left side of your mouse. These entries are in chronological order with the most recently visited site at the top of the list.
